

## **Tri-Hot 5K Media Summary Sheet**

We developed Tri-Hot 5K with an audacious goal, to create a new putter construction for a complete shift in performance. Focusing on blade designs, we've moved the CG positioning forward and leveraged new materials in ways that have never been realized in a putter. Stainless steel, tungsten, and 6061 aircraft grade aluminum have all been meticulously crafted to re-invent what a blade can accomplish.

For our next goal, we wanted to achieve that same goal with mallets. Using our proven Tri-Hot formula, we've significantly raised the head's inertia while also moving the CG forward. The result is a more forgiving and better performing mallet. By applying large amounts of tungsten, we've developed an inertia level exceeding 5000 IZZ for incredible forgiveness, all while moving the CG closer to the face.

This combination promotes improved performance in speed control, spin control, speed consistency on off-center hits and a much tighter downrange dispersion versus conventional blades. We've changed how a putter is constructed and reinvented how a putter can perform.

### **Features & Benefits**

#### **High Performance and Tight Dispersion from Stainless Steel Front**

Built to improve performance by reducing the amount of side spin on off-center hits, resulting in putts that are closer to the original line, with tighter dispersion, and a greater chance to go in on less-than-perfect strikes. We achieve this through a 303 stainless steel front section that includes the hosel and face area. The back section of these putters has been finish milled to exact shape and weight, helping to keep the CG forward.

#### **Improved Forgiveness and Improved Roll From Tungsten Front Weights**

We've precisely positioned massive amounts of tungsten (up to 120 grams) behind the face in the toe and heel sections of the club head. The CG is moved forward for improved roll, while also increasing inertia to over 5,000 IZZ. It's an improved level of performance that's now available in new standard size mallets.

#### **Interchangeable Front Weights**

Available in 5, 10, 15 and 20 grams these removable weights allow you to dial in your head weight to your exact preference.

#### **Legendary White Hot insert**

The most popular insert of all time is back with the original formulation, feel, sound, and performance.

#### **Red Stroke Lab Shaft**

The newest generation of our proven multi-material Stroke Lab shaft features even better performance. Our Stroke Lab shafts are a staple in professional golf with wins across all global Tours.
