

Odyssey Golf Announces New TRTL Putters

CARLSBAD, Calif, October 28, 2026-- Today Odyssey Golf has announced its new TRTL lineup of putters, available at retail starting November 6th. These all-new mallet shapes are designed to deliver exceptionally high MOI in clean, confidence-inspiring designs.

The mid-mallet TRTL shape is built for easy alignment and reflects the modern mallet trend favored by Tour players and amateur golfers alike with Crank Hosel, Double Bend, and S Neck offerings. The new TRTL Max shape is designed with maximum MOI and features Odyssey's popular Square 2 Square design with zero torque, for players who want to minimize face rotation and keep the face square throughout the stroke.

TRTL putters feature new Twin Track alignment with long, uninterrupted lines. Every model features a new Ai-Star insert, a dual layer construction combining urethane and aluminum engineered to deliver consistent ball speed across the face and improve forward roll while delivering iconic Odyssey feel.

The body of the putters are crafted from steel and finished in a premium black PVD, the shell is made from a lightweight ABS and the sole or belly is made from lightweight aerospace-grade aluminum – the S2S model also has an aluminum shell. This advanced multi-material construction allows weight to be pushed to the perimeter of the putter to maximize MOI for greater stability and forgiveness.

The advanced dual-layer Ai-Star insert has an aluminum inner layer with a firmer urethane layer on the outside striking surface. This design delivers speed consistency across the face, incredible forward roll up and down the face, and a firmer responsive feel. This Forward Roll Design groove design is deeper and more aggressive with a 19° slope. It works in conjunction with the dual layer design to improve forward roll up and down the face.

Engineered with all new sole geometry, this putter is designed to sit naturally square the moment it is placed behind the ball. The refined rake and camber work together to help the head sole flush to the ground and settle into proper alignment, giving players a more confident setup and a more consistent start to every stroke.

And four discrete weights positioned in the corners of the putter head allow for unprecedented adjustability in an Odyssey mallet, allowing you to move the CG towards the front, rear, heel or toe of the head and fine tune the amount of toe hang the putter has.

“We’ve spent so much time developing and fine-tuning this product over the last year and a half,” said Eric Stubben, Odyssey R&D Director, Putters. “Conceptually it maximizes MOI and that’s something that we believe in. We wanted to bring the alignment line all the way to the face, to soften the edges, and we wanted to make the alignment lines highly visible. We feel really excited about where we ended up from a functionality standpoint and from a design standpoint as well. We’re excited about the MOI, the CG depth, and the insert really separates TRTL with our face technologies that create more ball speed consistency and better distance control across the face.”

“We believe this is the next iconic shape from Odyssey,” said Luke Williams, Odyssey Sr. Director of Putters. “Everything we’ve put into it from the all-new mallet shape to the insert, alignment and soling is engineered so that you can trust the TRTL to putt your best. It’s already trending on Tour, it’s incredibly popular, and we expect to see outstanding performance for players who put it in their hands.”

The TRTL lineup was first launched earlier this year in Japan, where it has already seen remarkable success, reaching #1 in the market. The lineup is creating incredible buzz on Tour as well, and is helping players significantly improve their putting, including Min Woo Lee and recent LPGA Tour winner Yuna Nishimura, along with many other non-staffers. It’s already Odyssey’s most requested putter model on Tour, and they expect even more go into play as the global Tours head into 2027.

The new TRTL Putters are available for pre-order now and are available at retail starting November 6th. The TRTL Crank Hosel, Double Bend and S Neck models have a retail price of \$349.99, and the TRTL Max Square 2 Square is \$399.99.
